

## Foundations 20 Math Rubrics

**FP20.1** Student demonstrates an understanding of the mathematics involved in a historical event or an area of interest.

<b>Beginning (1)</b>	<b>Approaching (2)</b>	<b>Proficiency (3)</b>	<b>Mastery (4)</b>
I need more help with becoming consistent with the criteria.	I am able to show how math was involved in my event/area. I collected data/stated facts that were relevant to my topic.	I am able to explain the connection to math in my event/area. I am able to identify any bias or points of view. I was able to identify my data collection method or where I found my facts.	I am able to explain the importance of the math involved in my event/area. I am able to interpret my data/facts as to how it impacts society. I can identify any controversial issues and present multiple sides of the issues with supporting data, if applicable.

**FP20.2a** Student demonstrates an understanding of inductive and deductive reasoning including: analyzing conjectures, analyzing spatial puzzles and games, providing conjectures, solving problems.

<b>Beginning (1)</b>	<b>Approaching (2)</b>	<b>Proficiency (3)</b>	<b>Mastery (4)</b>
I need more help with becoming consistent with the criteria.	I can make a conjecture by observing patterns and identifying properties. I can provide counterexamples to a conjecture with false conclusions.	I can analyze an argument for its validity. I can prove algebraic number relationships. I can prove conjectures. I can determine strategies for solving puzzles or winning games and explain these strategies.	I can justify the reasoning to my conjecture. I can identify situations involving inductive and/or deductive reasoning. I can identify errors in proofs. I can solve situational questions. I can compare inductive and deductive reasoning. I can create a variation of a puzzle or game and describe a strategy for solving the puzzle or winning the game.

**FP20.3a** Student demonstrates an understanding of proportional reasoning related to rates.

<b>Beginning (1)</b>	<b>Approaching (2)</b>	<b>Proficiency (3)</b>	<b>Mastery (4)</b>
I need more help with becoming consistent with the criteria	I can determine and compare unit rates.	I can solve rate problems. I can determine rates from graphs and tables. I can relate slope of a graph to rate. I can describe situations where a rate might occur. I can analyze situations in which unit rates are determined and give reasons if the rate should be used or not.	I can justify my work. I can create non symbolic representations for rates. I can explain the meanings of rate in a situation and can explain the effect of factors within a situation that could influence the rate. I can solve situational questions.

**FP20.3b** Student demonstrates an understanding of proportional reasoning related to scale diagrams.

<b>Beginning (1)</b>	<b>Approaching (2)</b>	<b>Proficiency (3)</b>	<b>Mastery (4)</b>
I need more help with becoming consistent with the criteria	I can determine 3 of 5 of the following: scale factor of 2D drawings, scale factor of 3D objects, determine unknown dimensions of 2D drawings, determine unknown dimensions of 3D objects, draw a scale diagram of a 2D shape.	I can determine scale factor of 2D drawings, determine scale factor of 3D objects, determine unknown dimensions of 2D drawings, determine unknown dimensions of 3D objects, draw a scale diagram of a 2D shape.	I can solve situational problems involving scale diagrams of 2D shapes and 3D objects.

**FP20.3c** Student demonstrates an understanding of proportional reasoning related to area, surface area and volume.

<b>Beginning (1)</b>	<b>Approaching (2)</b>	<b>Proficiency (3)</b>	<b>Mastery (4)</b>
I need more help with becoming consistent with the criteria.	I can find the ratio of areas, surface area or volume, given the scale factor of a 2D shape or 3D object,.	I can determine the scale factor and apply this to solve for a value, given the ratio of areas, surface area or volume of an object.	I can solve situational questions. I can explain the effect of a change in scale factor on the area of a 2D shape or the surface area or volume of a 3D object.

## Foundations 20 Math Rubrics

**FP20.4a** Student demonstrates an understanding of the properties of angles and triangles including: deriving proofs based on theorems and postulates about congruent triangles and solving problems.

<b>Beginning (1)</b>	<b>Approaching (2)</b>	<b>Proficiency (3)</b>	<b>Mastery (4)</b>
I need more help with becoming consistent with the criteria.	I can find missing angle measures in BASIC diagrams of parallel lines cut by a transversal, triangles, and polygons.	I can find missing angle measures in any type of diagram of parallel lines cut by a transversal, triangles, and polygons.	I can find missing angle measures when the given angles are a polynomial expression. I can construct parallel lines. I can perform error analysis. I can explain why certain angles are equal in parallel lines. I can derive proofs. I can verify if angles formed by non-parallel lines and transversals create the same relationships as those created parallel lines.

**FP20.5** Student demonstrates an understanding of the cosine law and sine law (including the ambiguous case).

<b>Beginning (1)</b>	<b>Approaching (2)</b>	<b>Proficiency (3)</b>	<b>Mastery (4)</b>
I need more help with becoming consistent with the criteria.	I can solve for a missing side or angle (excluding ambiguous case) when the diagram is given (including those in situational questions)	I can solve situational questions involving non right triangles (excluding the ambiguous case).  I can illustrate and explain the possibilities for a given set of measurements for the ambiguous case.	I can explain the steps in a proof of the sine law and cosine law. I can illustrate and explain the possibilities for a given set of measurements for the ambiguous case. I can perform error analysis. I can solve situational problems that involve the ambiguous case.

**FP20.6** Student demonstrates an understanding of normal distribution, standard deviation and z-scores.

<b>Beginning (1)</b>	<b>Approaching (2)</b>	<b>Proficiency (3)</b>	<b>Mastery (4)</b>
I need more help with becoming consistent with the criteria.	I can consistently determine at least 3 of the following: mean, median, mode, standard deviation, and z-score.	I can consistently determine the area under the curve. I can consistently sketch a normal distribution and analyze data to determine if it approximates normal distribution. I can compare normally distributed data sets and explain what it tells me. I can determine z-scores to fit a situation.	I can explain the application, meaning and purpose of: standard deviation, properties of a normal curve, and z-score.  I can solve situational questions.

**FP20.7** Student demonstrates an understanding of the interpretation of statistical data.

<b>Beginning (1)</b>	<b>Approaching (2)</b>	<b>Proficiency (3)</b>	<b>Mastery (4)</b>
I need more help with becoming consistent with the criteria.	I am able to identify the confidence level, confidence interval, and margin of error.	I am able to determine the range of the data in a poll/survey. I can explain how the size of the random sample used impacts the data. Using confidence intervals I can make inferences and decisions about a population from sample data.	I am able to critique real life examples in which statistical data is used to support a particular position. I can support a position by analyzing statistical data, as well as consider other factors.

## Foundations 20 Math Rubrics

### FP20.8a Student demonstrates an understanding of systems of linear inequalities.

Beginning (1)	Approaching (2)	Proficiency (3)	Mastery (4)
I need more help with becoming consistent with the criteria.	I can graph the solution of one linear inequality. I can determine the solution of a linear inequality. I can determine if a point is in the solution of a linear inequality. I can match a graph with its linear inequality.	I can write a system of linear inequalities for a given graph. I can graph the solution of a system of linear inequalities. I can determine if a point is in the solution of a system of linear inequalities. I can determine if the boundaries and their points of intersection are part of the solution region. I can match situations with the graphs of set of linear inequalities.	I can solve situational questions. I can verify my solution. I can justify my choice of solid or broken lines.

### FP20.8b Student demonstrates an understanding of optimization problems.

Beginning (1)	Approaching (2)	Proficiency (3)	Mastery (4)
I need more help with becoming consistent with the criteria.	Given an optimization problem with the constraints, objective function and graph, I am able to find the vertices and max/min values of the objective function.	Given the restrictions, constraints, and objective function, I am able to graph and find the coordinates of the vertices and determine possible solutions to the question.	I can solve an optimization problem given just the situation. I can justify and explain feasible regions, coordinates of vertices and other parts of optimization problems.

### FP20.9 Student demonstrates an understanding of the characteristics of quadratic functions of the form $y = a(x-p)^2 + q$ , including: vertex, intercepts, domain, range, and axis of symmetry.

Beginning (1)	Approaching (2)	Proficiency (3)	Mastery (4)
I need more help with becoming consistent with the criteria.	I can determine <ul style="list-style-type: none"> <li>• a, p and q</li> <li>• the coordinate of the vertex</li> <li>• the equation of the axis of symmetry</li> <li>• max/min value,</li> <li>• opens up/down</li> <li>• domain and range</li> </ul>	I can: <ul style="list-style-type: none"> <li>• write the equation of the function given the graph</li> <li>• identify the roots/zeros/x-intercepts</li> <li>• determine y-intercept</li> <li>• sketch the graph of a quadratic function</li> <li>• determine the axis of symmetry given the x-intercepts</li> </ul>	I can: <ul style="list-style-type: none"> <li>• explain the relationship between the roots, zeros and x-intercepts</li> <li>• explain what domain and range means in a situation</li> <li>• explain the number of possible x-intercepts a quadratic function has</li> <li>• explain the effects on the graph when a, p and q are changed</li> <li>• solve situational questions</li> </ul>
